## Huntsville Centerengineer awarded Bronze Le’Fleur Award

**HUNTSVILLE, Ala.** – Recognized for outstanding service as an Army Engineer, Ronald Brown received the Bronze de’Fluery Award for 41 years of service in a July 8 ceremony at the U.S. Army Engineering and Support Center, Huntsville. As a Vietnam veteran, Brown first served two years as an Army Engineer Officer before beginning a 39 year career as a Civil Engineer with the U. S. Army Corps of Engineers.

As chief of the Site Development Branch of the Engineering Directorate, Brown’s team pioneered cutting-edge procedures for computerized design that have become the standard for government and industry. He developed a team that has become the subject matter experts for design of military training ranges all over the world. He has also led several technically expert teams in support of major programs such as National Missile Defense, Chemical Demilitarization and Centers of Standardization.

In addition to Brown’s engineering management capabilities, he has been key to the Center’s Architect-Engineering contracting functions. His detailed knowledge of procurement processes and procedures has played an important role in the Center’s ability to successfully team with industry on nationally important projects.
